**Materials Society
of Cumbria**
Founded 1960
www.iom3.org/msc

Agenda:

James Walker Cockermouth - An introduction
Quality Control - Site approval process and focus areas
What is an Elastomer?
Site tour - Factory & Materials Technology Lab

If possible, attendees should bring their own safety shoes, but a range of shoes are available should anyone not have their own. All other PPE will be provided on the day.

About James Walker:

James Walker holds a reputation as a leading force in the application of materials technology to provide effective solutions to operational issues in critical applications - including in the nuclear sector.

The Cockermouth site is home to the High Performance Elastomer centre of expertise. It is here that James Walker design, test and manufacture their own elastomer materials for seal-related products, including many bespoke developments for specific customer applications. There is total control and traceability through every stage of the manufacturing process.
