

“Opportunities for Circular Steel in Scotland”

Russ Hall (Uni of Warwick Manufr Group)

When: Tue 28th Nov 2023 at 6pm GMT

Where: on-line only Registration

<https://tinyurl.com/fzu6ffvz>

Steel is a strategically important material within the Scottish economy and is embodied within its stocks of buildings, infrastructure, and many different products. As a highly recyclable material, steel has the potential to achieve high levels of circularity. This presentation will explore what opportunities there may be for increasing the circularity of the steel within Scotland.

Russ Hall is High Value Manufacturing Catapult's chief engineer for net-zero, setting strategy for HVM Catapult and overseeing the cross-centre programmes of work which help UK manufacturing move towards it's net-zero obligations. Russ has over 20 years of experience in energy generation, heavy engineering and the foundation industries.
