

## Rod Stace

I have worked as a professional mining engineer both within industry and academia since 1968. I worked as a mining engineer in a variety of roles for British Coal up to 1995. Following that I moved into the University of Nottingham. Until my retirement from full-time employment at the end of 2015, I was Associate Professor in the Department of Civil Engineering.

In addition to my academic duties, I have provided consultancy services in a range of engineering activities. This included expert witness work in legal cases and also the provision of advice on geotechnical aspects of mine planning for mining companies. I also managed commercial rock testing activities at the University, as well as offering testing and advice on the use of non-metallic materials underground.

In addition to my role in MTD, I am a member of the IOM3 Local Affairs Board. I am a Past-President (1998 – 1999) of the South Midlands Mining and Minerals Institute. I remain on the council of that society as Treasurer.
